#### **DETAILED ACTION**

## Response to Arguments

Applicant's arguments filed 21 July 2006 have been fully considered but they are not persuasive.

In response to the applicant's argument that Silver fails to disclose communication between the port and the opening, it is noted that the instant claim does not require the port and the opening to be directly connected by a channel. It is still within the scope of the claim that the port and the opening are in communication with each other (i.e. air may pass through one and then the other) without being directly connected. Therefore, since the port and the opening disclosed by Silver are within the same air path, they are considered to be in communication with one another and fulfill the limitations of the claim.

In response to the applicant's argument that the stopper of Silver does not sealably engage the female component, it is noted that the degree of sealing is not disclosed in the instant claim. The stopper of Silver snugly engages the female component to create a seal, and therefore fulfills the claimed limitations.

#### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3761

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Silver (5,797,875).

With respect to claims 1, Silver discloses an adapter 32, as shown in figure 1, connecting a vacuum source 24 to a breast shield 22. The adapter 32 comprises a housing 46, as shown in figure 2, having two female coupling components 52 defined by the interior sidewall surface of the housing. A port 42 allows communication with the internal chamber of the housing via channels 59. The female coupling components 52 are sized and shaped to fit snugly with the male coupling components, as disclosed in column 3, lines 62-66. The male coupling components 54, as shown in figure 22, have a first end, a second end, and a passageway connecting the ends. The first end receives vacuum tubing 44 and the second end receives the female coupling component, as disclosed in column 5, lines 52-61. The second end has a first end diameter 82, a second end diameter 86 that is greater than the first end diameter 82, and a sealing surface 84. The male coupling component is received in the upper portion of the female coupling component to form an airtight engagement. Since the female coupling components 52 are sized and shaped to fit snugly with the male coupling components 54, the female components therefore have an upper portion having a diameter matching the second end of the male component, and a lower portion having a diameter matching the first end of the male component. Therefore, the female coupling components have an upper portion having a diameter greater than the diameter of the lower portion. A stopper 70 is provided to engage the upper portion of the female coupling component, as shown in figure 21. An aperture 63 extends

Art Unit: 3761

between ambient atmosphere and the female coupling component, as disclosed in column 5, lines 30-33.

#### **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 7 and 35 of copending Application No. 10/600,078. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would be obvious that the amount of flow of the stoppered coupling component is less than the flow of the unstoppered coupling component since the purpose of the stopper is to impede flow.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

### Conclusion

Page 5

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. Lynne Anderson whose telephone number is (571) 272-4932. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
